DESIGN IT! AUGMENTED REALITY APPS WITH METAVERSE

INTRODUCTION

Change the world around you by making an augmented reality app. You can create interactive stories that let you go on real-world scavenger hunts where you are hunting for digital treasures or make weird face filters. Augmented reality (AR) is an interactive experience of a real-world environment where a computer enhances the objects that reside in the real world. A great example of an AR app is Pokemon Go.

WHAT WE'LL BE USING:

- PC or Mac
- iPads

IN THIS ACTIVITY YOU WILL:

- Learn the difference between augmented and virtual reality
- Create an augmented reality app
- Design a face filter or scavenger hunt for your friends

Subjects:

- Augmented Reality
- Design
- Interactive Storytelling

Standards:

- 4B
 - 5A
 - 5B
- iste.org

Maker

Capacities:

- Tinker to Explore
 - Finding Opportunities
- agencybydesign.org

Key Terms

- Augmented Reality
- Mixed Reality
- Real-time interaction

Share what you made! @DoSpaceOmaha #DoSpaceSummer
